

Family History of Alzheimer's Disease Weighing on your Mind?

****FREE** PUBLIC TALK** **LOCATION**

**Asheville Compounding
Pharmacy
760 Merrimon Avenue
Asheville NC 28804
(828) 255-8757**

DATE & TIME

**Thursday March 16, 2017
6 PM**

MILD MEMORY IMPAIRMENT AND EARLY ALZHEIMER'S DISEASE CAN BE TREATED

- **The brain has an innate dynamic ability to repair itself when properly supported.**
- **Identifying and treating causes of cognitive and memory impairment has been shown to sustainably reverse mild memory impairment and symptoms of early Alzheimer's disease.**

COME LEARN ABOUT:
Healthy Brain Rx
a holistic medical program
for reversing memory loss &
preventing Alzheimer's
disease

Cynthia J. Libert, MD of Great Smokies Medical Center in Asheville, NC trained at the Buck Institute for Research on Aging under Dale Bredesen, MD. Bredesen, a graduate of Duke University Medical School in Durham, NC, is recognized internationally for his pioneering insights into the fundamental causes of Alzheimer's disease. He recently presented his innovative protocol for reversing memory loss titled: *21st Century Medicine and the Reversal of Cognitive Decline in Alzheimer's Disease* at the Cleveland Clinic Grand Rounds.

After observing the uniform failure of drug trials to successfully treat Alzheimer's, Dr. Bredesen's investigations determined that Alzheimer's is not a single disease, but is the result of many dysregulations in brain-signaling that support memory. He discovered that *anti-brain* factors, which interfere with brain health and memory, can be offset with *pro-brain* interventions. Dr. Bredesen's understanding of the molecular roots of Alzheimer's provided many targets that became the basis of his therapeutic program to optimize brain function for those with subjective cognitive impairment, mild cognitive impairment and early Alzheimer's disease.
